Enhance Your Business in the Cloud: What is missing in your cloud solution?

GLOVIA OM gives you the ability to control and manage your inventory. Finding the perfect balance of creating enough supply in your inventory to meet your increasing demand from customers can be tricky. Fortunately, GLOVIA OM has the solution to help aid in controlling your inventory. GLOVIA OM gives you complete inventory visibility anytime.

GLOVIA OM Business Benefits
GLOVIA OM enables you to improve inventory visibility, optimize inventory levels and control inventory operations. With GLOVIA OM you can increase inventory accuracy and customer service levels and, at the same time, reduce your carrying costs, stock-outs, and inventory write-offs. GLOVIA OM helps you to make faster, more accurate decisions by tracking every stage of global inventory in a single system.

Flexible Inventory Structure
All business operations are unique in their own way. You need the flexibility to control and track inventory in a manner that reflects the way you do business. GLOVIA OM Inventory adapts to your existing and future business needs.

Item Management
GLOVIA OM enables you to capture and maintain complete records of the items you store in inventory. You can record item attributes, such as color, size, weight, item family and item group. You can also store related, up-sell, cross-sell and substitute items. You can even maintain multiple catalogs and price books in the system.

Inventory Costing
GLOVIA OM Inventory has comprehensive costing and valuation management so that you can enter and maintain costing information quickly and easily, and use this information to calculate appropriate valuations effortlessly. Integration with GLOVIA OM Manufacturing and Purchasing, allows you to recognize and record cost variances and generate inventory-related accounting lines for all transactions.

Transfer Order Management
When managing inventory by locations, items can be moved between locations for a warehouse easily. It also enables swift inter-warehouse item transfer. You can create inter-warehouse item transfer orders independent of your order processing and purchasing functions.

Stock and Location Replenishment
You need to know when your supply items are getting low. With powerful automation capabilities and intuitive data screens, you can easily replenish items with GLOVIA OM Inventory. You can generate a replenishment order based on current stocking levels, order quantity, order multiple and reorder point quantity.

You can receive and ship item and lot combination to maintain complete lot tracking in the system. With serial number control you can track item and serial number combination while receiving, stocking and shipping.

**Reservations, Backorder Management, and Fulfillment**

You need to know if you can deliver on time to your internal and external customers, and you need to do so in the most cost-efficient manner. Using GLOVIA OM Inventory, you can track and manage all your demand requirements to maximize your customer service levels. You can reserve stock to fulfill backorders and customer orders. You can create and manage internal and external item orders (demand) from Sales Orders, Work Orders, Transfer Orders and Consignment orders. You can use Purchasing and Manufacturing to create and manage supply orders. Streamlining your fulfillment operations is easy with the fulfillment engine, which has powerful but flexible rules taking orders from one fulfillment stage to another (that is, from picking to packing to shipment or quick pack or quick ship). You can obtain warehouse efficiencies using online transactions and decrease the associated paperwork and cost. In addition, the fulfillment capabilities enable you to group orders and order lines for efficient picking, packing, and shipping.

**Item Attributes**

GLOVIA OM Apparel/Attribute Management provides a solution for multi-attribute items that allows simple and effective inventory management. Multi-attribute items are those items that support several attributes such as color, size, or style. For example, a shirt may be available in different colors and sizes. Or steel could be available in different lengths and weights. After setting up a parent item, the system will automatically generate multiple combinations of attributes as child items, drastically reducing the amount of setup time required. The item availability inquiry allows you to view the on-hand quantities for all combinations on matrix screen.
