

ENTERPRISE SEARCH

FUJITSU GLOVIA

Maximizing User Productivity was our key consideration when creating this functionality; hence this search not only finds matching results for search criteria entered, but offers upload capabilities, data security, application filters, and functional links for each match found.

Search Feature

The first feature is an 'out of the box' solution for searching the 'core' data stored in the GLOVIA G2 database. Maximizing User Productivity was the key consideration in the design process; hence the search not only finds matching results for search criteria entered it provides:

- Data security that ensures users only see the data they normally have access to in GLOVIA G2
- Application filters and links that allow the user to minimize the displayed search results based on relevancy and/or to jump to the most relevant group of results
- Appropriate GLOVIA G2 functional links for each specific match found
- Functional security that ensures users only have access to the functions they normally have access to in GLOVIA G2

The second Enterprise Search Capability is a development tool that allows the Enterprise search results 'reach' to be extended to meet customer specific needs. Custom fields, tables and functions can be added to the search capabilities using this capability.

The screenshot displays the GLOVIA G2 Enterprise Search interface. At the top, the search bar contains the text "new project" and a search button. Below the search bar, the results are categorized into "PurchaseOrder_MaterialSupply(4)" and "Sales Orders(1)". The "PurchaseOrder_MaterialSupply(4)" category is expanded, showing three results. Each result includes a "Project Material Line Associated To the PO" link and a "GLOVIA Objects/ Entities Link" link. The "Sales Orders(1)" category is also expanded, showing one result. On the right side of the interface, there is a "Search Category Results" sidebar with a list of search categories and their counts, including "FIM (5)", "PurchaseOrder_MaterialSupply (4)", "Project Material Line Associated To the PO (3)", "GLOVIA Objects/ Entities Link (1)", "Sales Orders (1)", "Work Orders (1)", "Accounts Payable (0)", "Accounts Receivable (0)", "Call Center (0)", "Customers and CRM Accounts (0)", "Engineering (Material Items) (0)", "Equipment Register (0)", "General Ledger (0)", "Inventory (Current) (0)", "Inventory (History) (0)", and "Supplier (0)".

Function and Menu Search Capabilities

The search capability provides a solution for searching on all GLOVIA G2 function/menu shortcuts/ names.

- Results include a one-click link to the function.
- Results include custom functions and menu's.

Upload Feature Capabilities

This feature provides the ability to define an 'Upload' button on practically any GLOVIA G2 screen using GLOVIA G2 Configurable UI capabilities.

It provides the ability to upload documents, spreadsheets, photographs, etc. and store them based on key information displayed on the screen.

The functionality used to index and store the documents can be configured to suit specific business needs without any programming or customization.

For example: Inspectors using GLOVIA G2 on a tablet to conduct inspection activities can now upload photographs of damaged items and store them based on a Receiver number, an inspection report number, a Return to Supplier number, Work Order number, RP Schedule, Lot number, etc.

The upload feature can be used in thousands of practical scenario's to upload a wide variety of files, photographs and documents. It provides a convenient, cost effective and simple to implement solution wherever there is a need to store externally generated information and link it to GLOVIA G2 data so that it can easily be retrieved and reviewed at a later date from within GLOVIA G2.

The functionality supports the upload to document repositories that include Share-Point and Transform Content Center. It also supports the ability to upload to file shares.

Once uploaded the documents, spreadsheets, photographs, etc. can then be retrieved and displayed from within GLOVIA G2.

The Upload Capability utilizes an HTML5 control and requires the use of GLOVIA G2 Version 3.5.0 (or later), and, GMEAP.
